SET 1 – Online Grocery Delivery Application

Business Scenario: A regional supermarket chain is launching a grocery ordering and home-delivery application. Management wants an estimated, prioritised backlog before the first sprint begins.

Task 1: Product Vision Statement, Scrum Roles & Anti-Patterns

Product Vision Statement

FOR busy shoppers who need a convenient way to order fresh groceries,
THE Online Grocery Delivery App
IS A mobile and web ordering platform
THAT allows customers to browse, order and receive groceries at their doorstep within 2 hours.
UNLIKE traditional supermarket visits or phone ordering,
OUR PRODUCT delivers a seamless, real-time tracked delivery experience with personalised offers.

Scrum Roles:

Role	Person / Team	Anti-Pattern to Avoid
Product Owner	Priya Sharma (Business Analyst/Supermarket Manager)	Anti-Pattern: Absent Product Owner – PO must be available for backlog grooming, sprint reviews and clarifications. An unavailable PO leads to stale backlog and misaligned delivery.
Scrum Master	Rahul Verma (Agile Coach / Facilitator)	Anti-Pattern: Scrum Master as Project Manager – The SM should not assign tasks or micromanage. This violates self-organisation and team autonomy, reducing trust and velocity.
Development Team	5 cross-functional members: 2 FE devs, 1 BE dev, 1 QA, 1 UX designer	Anti-Pattern: Dev Team Member as Hero – One person doing all critical work creates a bottleneck. Teams must share knowledge and

		collective ownership to maintain sustainability.

Task 2: Epics and User Stories (As a / I want / So that)
Epic 1 – Browse & Search

- US1. As a customer, I want to browse product categories, so that I can find items easily.
- US2. As a customer, I want to search for products by name, so that I can quickly locate specific items.
- US3. As a customer, I want to filter products by price and rating, so that I can compare and choose the best option.

Epic 2 – Cart & Checkout

- US1. As a customer, I want to add items to my cart, so that I can purchase multiple products in one order.
- US2. As a customer, I want to view and edit my cart, so that I can review my selection before payment.
- US3. As a customer, I want to checkout and pay securely, so that my order is placed and my data is protected.
- US4. As a customer, I want to apply promo/coupon codes at checkout, so that I can receive a discount on my order.

Epic 3 – Delivery Tracking

- US1. As a customer, I want to track my delivery in real-time on a map, so that I know exactly where my order is.
- US2. As a customer, I want to receive SMS/email notifications for order updates, so that I am always informed.
- US3. As a customer, I want to reschedule my delivery slot, so that I can ensure I am home when the order arrives.
- US4. As an admin, I want to assign orders to delivery agents, so that deliveries are optimally distributed.
- US5. As a delivery agent, I want to mark an order as delivered, so that the system updates the customer's status.

Task 3: INVEST Checklist Applied to User Stories

User Story	Independent	Negotiable	Valuable	Estimable	Small	Testable	Result
Browse product categories	✓	✓	✓	✓	✓	✓	PASS
Search for products by	✓	✓	✓	✓	✓	✓	PASS

name							
Add items to cart	✓	✓	✓	✓	✓	✓	PASS
Checkout and pay securely	✓	✓	✓	✓	✗ Large	✓	SPLIT
Track delivery in real-time	✓	✓	✓	✓	✓	✓	PASS
Receive SMS/email notifications	✓	✓	✓	✓	✓	✓	PASS

Note: 'Checkout and pay securely' was flagged as too large (8+ points). It was vertically split into:
(a) As a customer, I want to enter payment details so that I can place my order.
(b) As a customer, I want to receive a payment confirmation email so that I know my order is confirmed.

Task 4: Given / When / Then Acceptance Criteria
Story: Browse product categories

[Positive] Given I am on the home page,
When I tap on 'Fruits & Vegetables' category,
Then I should see all products listed under that category with images, prices, and ratings.

[Negative] Given the product category page loads,
When there are no products in that category,
Then I should see a message 'No products available in this category' and a link to browse other categories.

Story: Search for products by name

[Positive] Given I am on any screen,
When I type 'apple' in the search bar and press Enter,
Then I should see a list of all products matching 'apple' sorted by relevance.

[Negative] Given I am on the search screen,
When I type 'xyz123' (no matching product),
Then I should see the message 'No results found for xyz123. Try a different search term.'

Story: Track delivery in real-time

[Positive] Given my order is confirmed and out for delivery,
When I tap 'Track Order',
Then I should see a live map showing the driver's location updating every 30 seconds.

[Negative] Given my order is still being packed,
When I tap 'Track Order',
Then I should see the message 'Live tracking begins when your order is out for delivery.'

Story: Apply promo code at checkout

[Positive] Given I have a valid promo code 'SAVE20',
When I apply it at checkout,
Then I should see a 20% discount applied and the updated order total.

[Negative] Given I enter an expired promo code 'JULY10',
When I apply it at checkout,
Then I should see the error 'This promo code has expired. Please use a valid code.'

Story: Receive SMS/email notifications

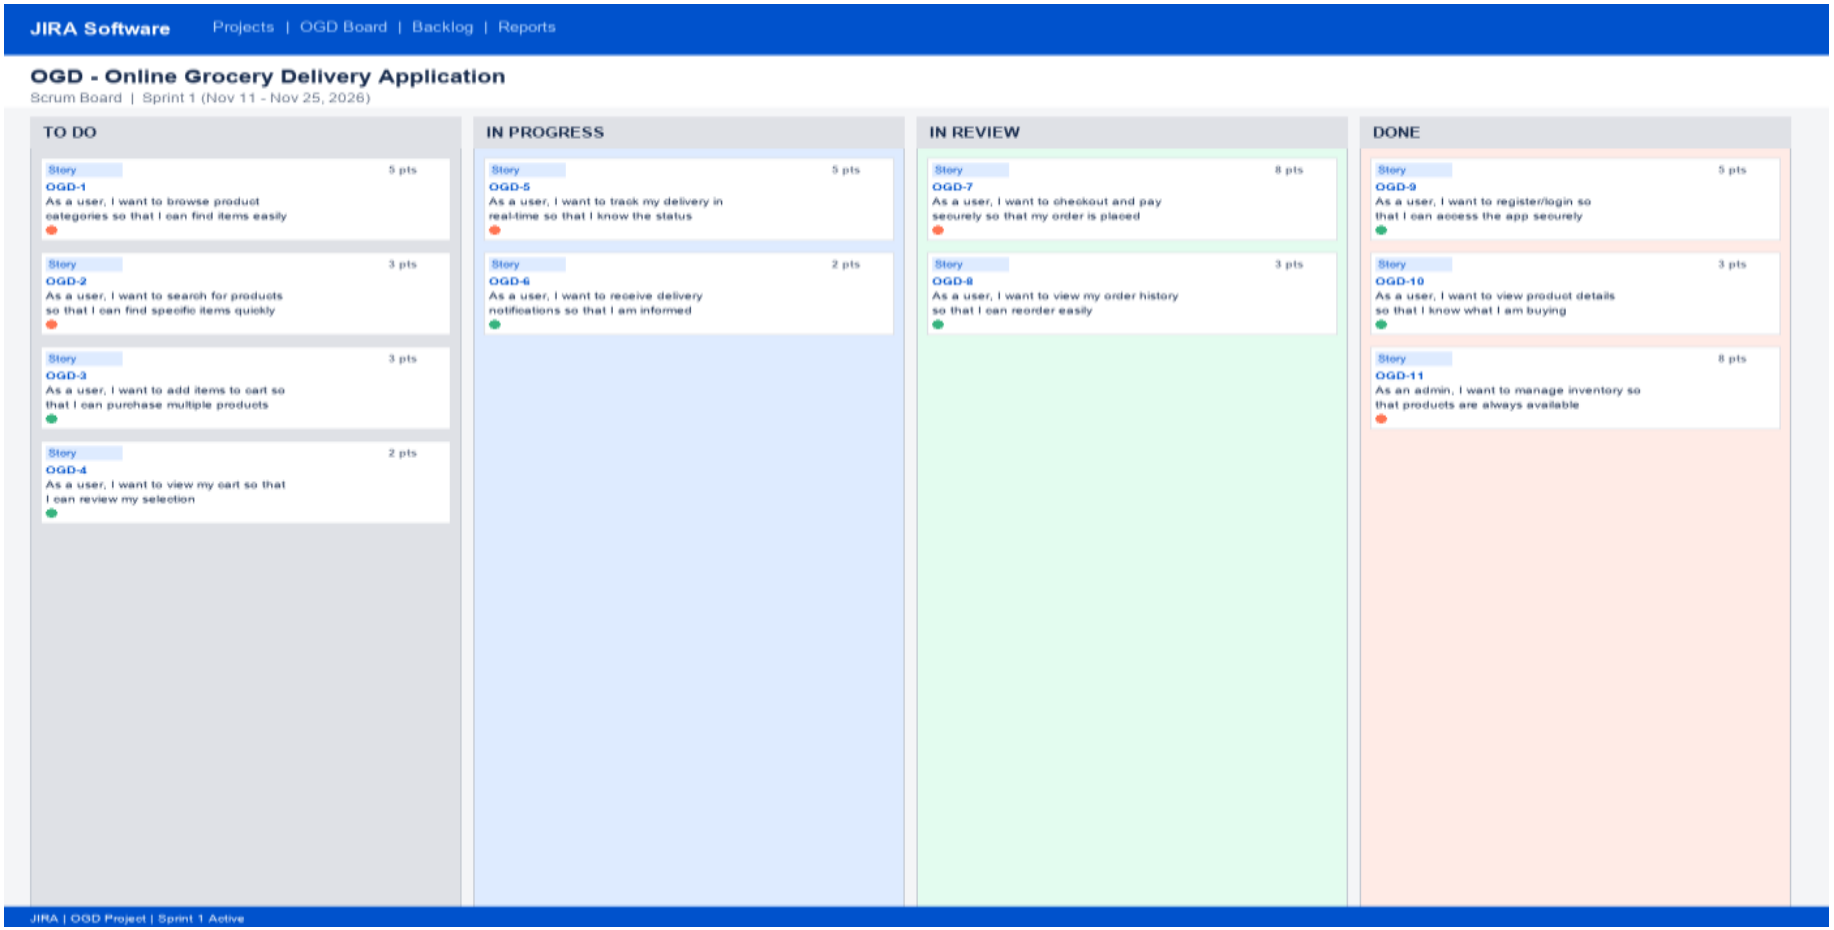

[Positive] Given my order is dispatched,
When the delivery agent scans the package,
Then I should receive an SMS and email within 1 minute with order details and estimated arrival time.

Task 5: MoSCoW Prioritisation & Fibonacci Story Point Estimation (Planning Poker)
The backlog was prioritised using MoSCoW and estimated using Planning Poker with the Fibonacci sequence (1, 2, 3, 5, 8, 13).

Story ID	User Story	MoSCoW	Fibonacci Points	Planning Poker Notes
OGD-1	Browse product categories	Must Have	5	All voted 5 – quick consensus
OGD-2	Search for products by name	Must Have	3	All voted 3 – simple filter logic
OGD-4	Add items to cart	Must Have	3	All voted 3 – standard CRUD operation
OGD-6	Checkout & pay securely	Must Have	8	One outlier voted 13 (payment gateway complexity); discussed and settled on 8
OGD-8	Track delivery in real-time	Must Have	5	One voted 3; outlier explained live map API effort → agreed 5
OGD-7	Apply promo codes	Could Have	3	All agreed 3 – straightforward discount logic
OGD-10	Reschedule delivery slot	Won't Have	3	Not in Sprint 1 scope
OGD-3	Filter products by price/rating	Should Have	3	All voted 3 – UI filter component

Task 6: JIRA Board – Epics, User Stories, DoR & DoD

JIRA Board – Sprint 1 Active:

JIRA Software
Projects | OGD Board | Backlog | Reports
OGD - Online Grocery Delivery Application
Scrum Board | Sprint 1 (Nov 11 - Nov 25, 2026)
TO DO

Total Story Points: 45 | Total Stories: 12 | Sprint Velocity Target: 30 pts

Definition of Ready (DoR) & Definition of Done (DoD):

OGD - Definition of Ready & Definition of Done

Definition of Ready (DoR)

- ☐ User story is written in As a/I want/So that format
- ☐ Acceptance criteria are clearly defined (Given/When/Then)
- ☐ Story is estimated with story points via Planning Poker
- ☐ Dependencies are identified and resolved
- ☐ Story has been reviewed by the Product Owner
- ☐ Story is prioritised in the backlog (MoSCoW)
- ☐ Story fits within one Sprint
- ☐ No external blockers exist

Definition of Done (DoD)

- ☐ All acceptance criteria are met and verified
- ☐ Unit tests are written and passing (>80% coverage)
- ☐ Code has been reviewed and approved by peer
- ☐ Integration tests completed successfully
- ☐ No critical/high bugs remain open
- ☐ Feature is deployed to staging environment
- ☐ Product Owner has accepted the story
- ☐ Documentation updated (API/user docs if applicable)

SET 2 – Insurance Claims Portal

Business Scenario: An insurer is building a self-service portal where customers lodge claims, upload documents, and track settlement status.

Task 1: Product Vision & Waterfall vs Agile Comparison
Product Vision Statement:

FOR insurance customers who need a fast, transparent way to manage their claims,
THE Insurance Claims Portal
IS A self-service digital platform
THAT enables customers to lodge, track and receive settlement for claims without branch visits.
UNLIKE paper-based or phone-based claim processes,
OUR PRODUCT provides real-time visibility, faster processing, and reduced administrative burden.

Waterfall vs Agile Comparison:

Dimension	Waterfall	Agile (Scrum)
Delivery Model	Single big-bang release after all phases complete	Incremental delivery in 2-week Sprints
Requirements	Fixed at the beginning; changes are costly	Evolving; backlog refined each Sprint
Customer Involvement	Only at beginning and end of project	Product Owner involved every Sprint
Risk Management	Risks discovered late (after build)	Risks surfaced early via Sprint Reviews
Testing	Performed after all development is complete	Continuous testing throughout each Sprint
Why Agile Suits ICP	—	Insurance regulations change frequently; Agile allows the team to adapt quickly. Customer feedback can be incorporated every Sprint, ensuring the portal meets actual user needs. Early MVP delivery builds stakeholder trust.

Task 2: Epics and User Stories (12–14 Stories)
Epic 1 – Claim Registration

- US1. As a customer, I want to register on the portal so that I can access claim services online.
- US2. As a customer, I want to login securely so that my sensitive claim data is protected.
- US3. As a customer, I want to lodge a new claim online so that I don't need to visit the branch.
- US4. As a customer, I want to submit a validation form with claim details so that my claim meets the required criteria.

Epic 2 – Document Upload

- US1. As a customer, I want to upload supporting documents so that I can substantiate my claim.
- US2. As a customer, I want to preview uploaded documents before submission so that I can verify their correctness.
- US3. As an admin, I want to flag invalid or incomplete documents so that fraudulent or insufficient claims are rejected.

Epic 3 – Claim Tracking

- US1. As a customer, I want to view the real-time status of my claim so that I am always informed about its progress.
- US2. As a customer, I want to view my complete claim history so that I can reference previous claims.
- US3. As a manager, I want to assign incoming claims to agents so that claims are processed efficiently.

Epic 4 – Settlement Notifications

- US1. As a customer, I want to receive a notification when my settlement is approved so that I know my claim has been resolved.
- US2. As a customer, I want to receive an email confirmation when my claim is received so that I have a record of submission.
- US3. As a manager, I want to generate monthly claim settlement reports so that I can analyse trends and improve processing times.
- US4. As a customer, I want to get auto-fill suggestions from previous claims so that data entry is faster.

Task 3: INVEST Review & Vertical Splits
Stories were reviewed against INVEST criteria. Stories that failed 'Small' or 'Independent' were split vertically (by user value) rather than technically (by layer).

Story	INVEST Issue	Split Strategy	Split Story A	Split Story B
Lodge a claim online (ICP-3)	Too Large (8+ points) – Not Small	Split by user outcome (not by DB/API layer)	As a customer, I want to fill in and save a draft claim form so that I can complete it in stages.	As a customer, I want to submit a completed claim form so that it enters the review queue.
Manage doctor availability (HAB-11)	Not Independent from booking flow	Separate admin vs patient flows	As an admin, I want to block unavailable dates for a doctor so that patients see accurate availability.	As an admin, I want to set working hours for each doctor so that appointments respect their schedule.

Task 4: Given / When / Then Acceptance Criteria
Story: Lodge a claim online

[Positive] Given I am a registered customer and logged in,
When I complete the claim form with valid details and click 'Submit',
Then my claim should be created with a unique reference number and status 'Received'.

[Negative – Validation Failure] Given I am on the claim submission form,
When I submit without entering the incident date,
Then I should see the error 'Incident date is required' highlighted in red and the form should not submit.

Story: Upload claim documents

[Positive] Given I am on the document upload screen,
When I upload a valid PDF file under 10MB,
Then the file should be uploaded successfully and shown in the 'Uploaded Documents' list with a green tick.

[Negative – Validation Failure] Given I am on the document upload screen,
When I try to upload a file larger than 10MB,
Then I should see the error 'File size exceeds 10MB limit. Please upload a smaller file.'

Story: Track claim status

[Positive] Given my claim is under review,
When I navigate to 'My Claims',
Then I should see my claim listed with status 'Under Review' and estimated resolution date.

Task 5: Planning Poker – Story Estimation with Fibonacci (1,2,3,5,8,13)
Each story was estimated by the full Scrum team using Planning Poker cards.

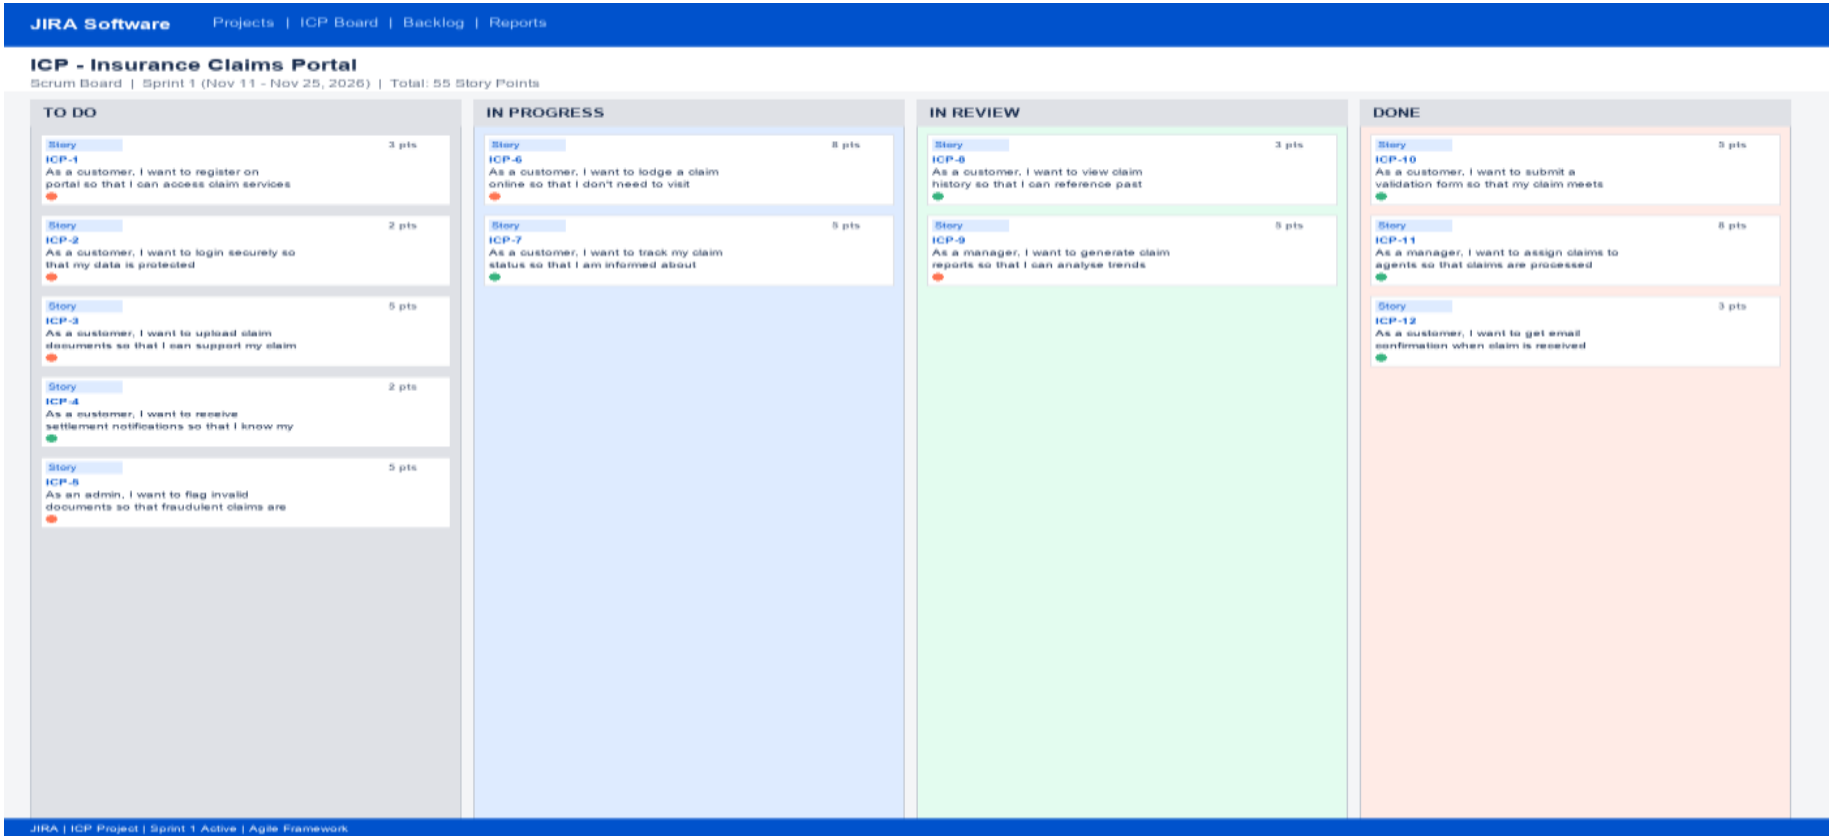

Story ID	User Story	Team Votes	Final Points	Discussion & Outlier
ICP-1	Register on portal	3,3,3,3	3	Full consensus
ICP-2	Login securely	2,2,2,2	2	Full consensus
ICP-3	Lodge a claim online	8,8,13,8	8	One outlier (13) cited legacy system integration; accepted 8 after discussion
ICP-4	Submit validation form	5,5,5,5	5	Full consensus
ICP-5	Upload claim documents	5,5,5,3	5	One voted 3; outlier explained file validation & storage complexity → agreed 5
ICP-6	Preview uploaded documents	3,3,3,3	3	Full consensus
ICP-7	Flag invalid documents	5,5,5,5	5	Full consensus; includes admin workflow
ICP-8	Track claim status (real-time)	5,5,5,8	5	One voted 8; explained polling complexity; team settled 5 after story scope clarified
ICP-9	View claim history	3,3,3,3	3	Full consensus
ICP-10	Assign claims to agents	8,8,8,8	8	Full consensus; complex routing logic
ICP-11	Settlement notifications	2,2,2,2	2	Full consensus; event-driven trigger

ICP-12	Email confirmation	3,3,3,3	3	Full consensus
ICP-13	Generate claim reports	5,5,5,5	5	Full consensus
ICP-14	Auto-fill from previous claims	2,2,2,2	2	Full consensus; cache-based solution

Total Backlog Size: 59 Story Points across 14 stories.

Task 6: JIRA Project Board – Insurance Claims Portal

JIRA Board – Epics and Stories (To Do, In Progress, In Review, Done):

Estimated Product Backlog with Planning Poker Points:

ICP-14	Claim Registration	As a customer, I want to get auto-fill from previous claims so ...	Low	2	Could Have	To Do

Total Story Points: 59 | Total Stories: 14 | Planning Poker Used for All Estimates

Definition of Ready & Definition of Done :

ICP - Insurance Claims Portal | DoR & DoD

Definition of Ready (DoR)

- ☐ Story is written in As a/I want/So that format
- ☐ Acceptance criteria defined (Given/When/Then)
- ☐ Story estimated via Planning Poker (1,2,3,5,8,13)
- ☐ Story prioritised with MoSCoW method
- ☐ Dependencies identified and noted
- ☐ Product Owner approved the story
- ☐ Story is small enough to complete in one Sprint
- ☐ UI/UX mockup attached (if applicable)

Definition of Done (DoD)

- ☐ All acceptance criteria are met
- ☐ Unit and integration tests pass (>80% coverage)
- ☐ Code reviewed and approved by team lead
- ☐ Security validation completed (data encryption)
- ☐ Feature deployed to staging environment
- ☐ Product Owner has formally accepted the story
- ☐ No critical bugs remaining
- ☐ Release notes updated
- ☐ Regulatory compliance verified (GDPR/Insurance Act)

SET 3 – Hospital Appointment Booking Application

Business Scenario: A hospital group wants a mobile application for booking, rescheduling and cancelling doctor appointments, with reminder notifications.

Task 1: Vision Statement, Stakeholders & Scrum Role Mapping

Product Vision Statement:

FOR patients and doctors who need a simple, reliable way to manage appointments,
THE Hospital Appointment Booking App
IS A mobile-first healthcare scheduling platform
THAT allows patients to book, reschedule and cancel appointments with timely reminders.
UNLIKE manual phone-based booking with long wait times,
OUR PRODUCT reduces missed appointments by 40% through automated reminders and real-time slot management.

Stakeholder-to-Scrum Role Mapping:

Stakeholder	Scrum Role	Responsibility
Hospital Management / Admin	Product Owner	Defines product vision, owns and prioritises the backlog, signs off on Sprint goals
Agile Coach (IT Dept)	Scrum Master	Facilitates ceremonies, removes impediments, coaches team on Agile principles
Patients	Customer (External)	End users of the booking app; needs captured in user stories
Doctors	Customer (Internal)	Users of the schedule management feature; stories reflect doctor workflow needs
IT Development Team	Development Team	5-member cross-functional team: 2 mobile devs, 1 BE dev, 1 QA, 1 UX
Hospital Receptionist	Customer (Partial)	Handles escalations; stories for admin override and manual booking flow

Task 2: Epics and User Stories (Minimum 12 Stories)

Epic 1 – Booking

- US1. As a patient, I want to book a doctor appointment from the app so that I can get medical help without calling.
- US2. As a patient, I want to search for doctors by specialty so that I can find the most suitable doctor.
- US3. As a patient, I want to select an available time slot so that I can choose a convenient appointment time.

Epic 2 – Rescheduling

- US1. As a patient, I want to reschedule an existing appointment so that I can change to a more suitable time.
- US2. As a patient, I want to receive confirmation when my appointment is rescheduled so that I am informed of the new details.

Epic 3 – Cancellation

- US1. As a patient, I want to cancel an appointment from the app so that I can free up the slot for other patients.
- US2. As an admin, I want cancelled appointment slots to be automatically released so that other patients can book them.

Epic 4 – Reminders

- US1. As a patient, I want to receive a reminder 24 hours before my appointment so that I do not miss it.
- US2. As a patient, I want to choose my preferred reminder channel (SMS or email) so that I receive alerts where I prefer.

Epic 5 – Doctor Schedule Management

- US1. As a doctor, I want to view my daily appointment schedule so that I can prepare adequately for each patient.
- US2. As an admin, I want to manage doctor availability and block off dates so that only valid slots are shown to patients.
- US3. As a doctor, I want to update my available working hours so that appointment slots are always accurate.

Task 3: INVEST Review – Stories Not Independent or Testable

Original Story	INVEST Failure	Rewritten Story	Why Better
As a patient, I want the app to work well so that I am happy.	Not Testable, Not Estimable – too vague	As a patient, I want to book an appointment in under 3 steps so that the booking process is quick and easy.	Specific, measurable (3 steps), testable with UI automation
As an admin, I want to manage everything in the system.	Not Small, Not Independent – too broad	As an admin, I want to block unavailable dates for a specific doctor so that patients see accurate availability.	Focused, independent, one clear outcome, estimable as 3 pts
As a patient, I want to reschedule and get notifications.	Not Independent – combines two concerns	Split: (a) As a patient, I want to reschedule an appointment. (b) As a patient, I want to receive a rescheduling confirmation.	Each story is independent, estimable separately, and testable in isolation

Task 4: Given / When / Then Acceptance Criteria (Booking & Cancellation)
Story: Book a doctor appointment

[Positive] Given I am a registered patient and logged in,
When I select Dr. Rajan, choose '14 Nov 2026 at 10:00 AM' and click 'Confirm Booking',
Then my appointment should be confirmed and I should receive a confirmation SMS and email within 1 minute.

[Negative – Slot Already Taken] Given I am on the booking screen and 'Nov 14 at 10:00 AM' is the last available slot,
When another patient books that slot simultaneously,
Then I should see the message 'Sorry, this slot has just been taken. Please choose another available time.' and the slot should be removed from the available list.

Story: Reschedule an appointment

[Positive] Given I have an existing appointment on Nov 14 at 10:00 AM,
When I select a new slot on Nov 15 at 11:00 AM and confirm,
Then my appointment should be updated and I should receive a confirmation of the new booking.

[Negative] Given I try to reschedule to a slot within 2 hours of the appointment time,
When I select the new time and click 'Confirm',
Then I should see the error 'Rescheduling is not allowed within 2 hours of the appointment.'

Story: Cancel an appointment

[Positive] Given I have a confirmed appointment,
When I click 'Cancel Appointment' and confirm the cancellation,
Then my appointment status should change to 'Cancelled' and the slot should be released for other patients.

[Negative – Slot Already Taken / Edge Case] Given I have a confirmed appointment and attempt to cancel,
When the system is in maintenance mode,
Then I should see 'Cancellation temporarily unavailable. Please try again or call reception.' and the appointment should remain active.

Task 5: Business Value vs Effort Prioritisation & Planning Poker
Stories were prioritised by Business Value (High/Med/Low) vs Effort (Small/Med/Large). High Business Value + Low Effort stories entered Sprint 1 first. Planning Poker used Fibonacci: 1, 2, 3, 5, 8, 13.

Story Point vs Hour Explanation: A story point is a relative measure of complexity, effort, and risk. It is NOT an hour. In this team's context, 1 story point ≈ about half a day of focused work for the whole team. An 8-point story does not mean 8 hours — it means the story is significantly more complex, uncertain, or large than a 1-point story.

Story ID	User Story	Biz Value	Effort	Sprint Rank	Fibonacci Pts
HAB-1	Book a doctor appointment	High	Med	1 (Must)	5
HAB-9	Register and login	High	Med	2 (Must)	5
HAB-10	Doctor views daily schedule	High	Med	3 (Must)	5

HAB-11	Admin manages doctor availability	High	Large	4 (Must)	8
HAB-4	Patient receives reminders	High	Small	5 (Must)	2
HAB-6	Cancel an appointment	High	Small	6 (Must)	2
HAB-4b	Reschedule an appointment	High	Med	7 (Must)	3
HAB-7	Auto-release cancelled slots	Med	Med	8 (Should)	3
HAB-8	Reminder channel preference	Med	Small	9 (Should)	2
HAB-14	View appointment history	Med	Med	10 (Should)	3

Total Sprint 1 Estimate: 38 Story Points

Task 6: JIRA Board – Hospital Appointment Booking

JIRA Board – Sprint 1 Active (Booking, Rescheduling, Cancellation, Reminders, Doctor Schedule):

HAB - Hospital Appointment Booking Application

Scrum Board | Sprint 1 (Nov 11 - Nov 25, 2026) | Total: 60 Story Points

Total Story Points: 51 | Total Stories: 14 | Prioritised by Business Value vs Effort

Definition of Ready & Definition of Done (Minimum 6 Checklist Items Each):

HAB - Hospital Appointment Booking | DoR & DoD

Definition of Ready (DoR)

- ☐ Story follows As a/I want/So that format
- ☐ Acceptance criteria defined (Given/When/Then)
- ☐ Story estimated in Planning Poker (Fibonacci)
- ☐ Story prioritised (MoSCoW & Biz Value/Effort)
- ☐ Dependencies and risks identified
- ☐ Product Owner reviewed and approved story
- ☐ Story completable within one Sprint
- ☐ Healthcare compliance notes added (HIPAA/Privacy)

Definition of Done (DoD)

- ☐ All Given/When/Then criteria verified
- ☐ Unit tests written and passing
- ☐ Integration tests completed
- ☐ Patient data privacy validated
- ☐ Notification system tested (SMS/Email)
- ☐ Code reviewed and approved
- ☐ Feature demo given to Product Owner
- ☐ No high-severity bugs open
- ☐ Deployed to staging, smoke test passed
- ☐ Appointment conflict handling verified
